

WHEN FURNISHING, FURNISH INNOVATIVE

Sheer curtains are lightweight fabrics that cover over windows, soften room's lighting, and add an instant infusion of style into your interior decor. Sheer curtains give you a measure of privacy, but are also well-matched for a layered window treatment.

Sheer curtains can be manufactured using synthetic flame retardant (FR) textile fibers. They are washable and will not lose their FR properties with washing.

In stock are available permanently variety of plain fabrics, in a number of colors. In standard collection there are Canvases, Satins, Panamas, Piqué, Etamines, Crepé and other articles for quick supply.

For plain fabrics there is a wide range of finishes: Sanforized, Mercerized, Brushed, Calender.

Heavyweight curtains are usually used to give luxurious finish touch and at the same time to prevent sunlight from entering room. Standard blackout curtains and flame retardant blackout curtains are available in 150cm and 300cm widths. Blackout curtains are manufactured using synthetic flame retardant (FR) textile fibers. Our blackout curtains comply with the primary international regulations. They are washable and will not lose their FR properties with washing.

Sunscreen offers you total control over incoming light for any space. You may wish to dim out unwelcome light to improve visual and thermal comfort or opt for total dimming out of light - for specific purposes and applications.

Blackout can be designed as roller blinds or skylight blinds to match the precise requirements of a space and effects desired.

The various levels of opaqueness are available: from 100% blackout to translucent. Whether you need semi-transparent or translucent blinds to dim out a strong glare in the office or a complete blackout blind in the meeting room for use during video projections, or you wish to enhance sleep quality and night time comfort for guests, application possibilities are multiple and customizable for optimal results.

Pleated blinds (pli-sol) are shades made from a pleated fabric. When pulled up they sit at the top of a window, when open - space is hidden from sight.
